CLASS: PRIMARY SCHOOL

SUBJECT: BASIC SCIENCE

TOPIC: LIFE PROCESSES

LIFE PROCESSES

Looking at living things

Learning Objectives

Recognise the
concept of the
life processes,

State seven
things that
makes us
different from
non-living things

Living things

- Although all living things look different from each other, they all have seven things in common.
- These seven things are called **LIFE PROCESSES**.
- Something is only alive if it does all seven processes.

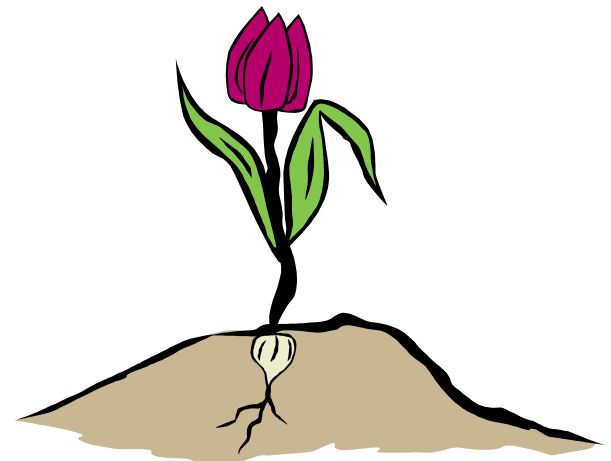

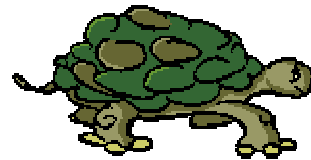

The background is a solid light green color. It is decorated with stylized white floral and leaf patterns. There are two main clusters of these patterns: one in the upper right quadrant and another in the lower right quadrant. The patterns consist of simple, elongated leaf shapes and small, five-petaled flower-like shapes. The overall style is clean and modern.

THE SEVEN LIFE PROCESSES

1

All living things
move

- Animals move their whole bodies to get from one place to another.
- Plants turn towards the light and their roots grow down into the soil.

2

All living things
reproduce

- Animals have babies.
- Humans have babies

- New plants grow from seeds.

3

All living things
are sensitive

- All living things respond to changes. Living things notice changes in their surroundings and react to them.

- Eg. Plants grow towards the light.

- Eg. People react to the temperature around them.

4

All living things
need nutrition

- Food is used to provide energy.

- Green plants make their own food using sunlight.

- Animals eat plants or other animals.

5

All living things
excrete

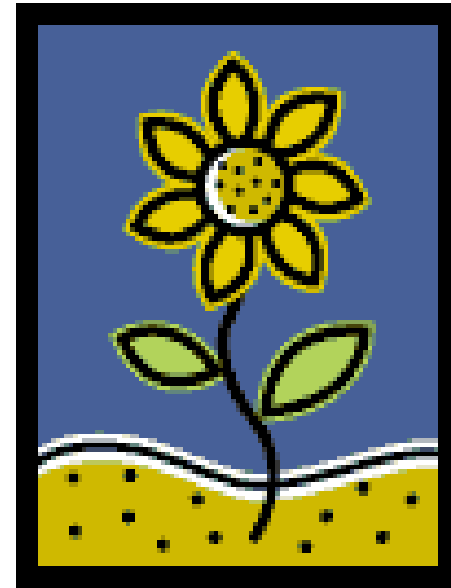

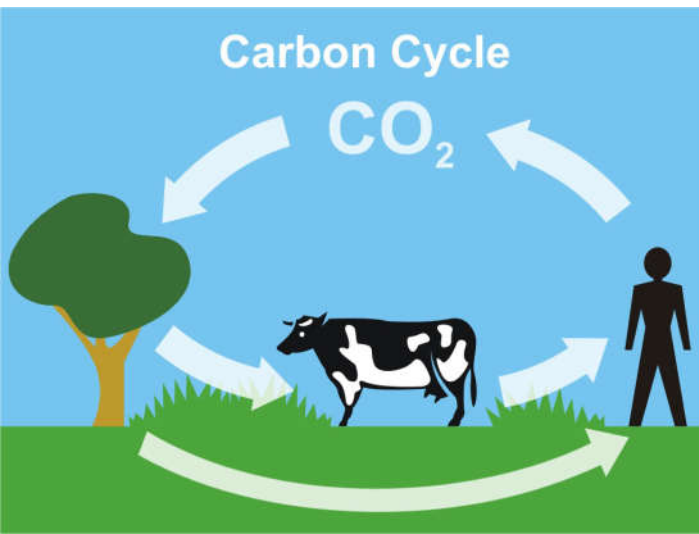

- Waste substances must be removed from the body.
- Plants and animals both need to get rid of waste gas and water.

6

All living things
respire

Plants and animals use the oxygen in the air to turn food into energy.

7

All living things
grow

- Babies grow into adults.

- Seedlings grow into plants.

The Seven life processes are move, reproduce, sensitive, nutrition, excrete, respire, grow

Summary

- Life processes are seven things that makes us to be different from non-living i.e move, reproduce, sensitive, nutrition excrete, grow
- Some animals move by walking, flying or crawling, animals give birth to there young ones, or laying egg and later crack. Animal excrete through urine and feces, plant excrete through stomatal pore.

Draw 5 Living things
and write what they
feed on.
