

**OGUN DIGICLASS**

**CLASS: SECONDARY SCHOOL**

**SUBJECT: MATHEMATICS**

**TOPIC: MENSURATION**

[www.ogundigiclass.ng](http://www.ogundigiclass.ng)

# OBJECTIVES

List examples of solid mensuration with life examples

State properties of solid mensuration

Calculate the area and volume of solid mensuration

# 3D shapes

# What shape am I?

- I have no flat faces.
- I have no straight edges.
- I have just one curved face.

I am a .....?

Well Done!

I am a sphere!

# What shape am I?

- I have one curved face.
- I have one flat face.
- My flat face is a circle.

I am a .....?

Great work!

I am a cone!

# What shape am I?

- I have 6 flat square faces
- I have 12 straight edges
- I have 8 corners.

I am a .....?

# What shape am I?

- I have one curved face
- I have 2 flat circular faces.

I am a .....?

# What shape am I?

- I have 6 flat faces
- My faces are all rectangles (square or oblong)
- I have 12 straight edges and 8 corners.

I am a .....?

Brilliant!

I am a cuboid!

# NET OF A SOLID MENSURATION

## CUBE

- A cube is a 3-dimensional shape that has six faces of equal dimension. This means that it has length, breadth (width) and height all of which are equal to each other

# NET OF A CUBE

# EXAMPLE ON CUBE

$$V_{\text{cube}} = a^3 = a \times a \times a$$

where  $a$  is the edge of the cube.

**Cube**

$$\text{Surface Area} = 6a^2$$

$$\text{Lateral Surface Area} = 4a^2$$

## EXAMPLE CONT..

The side of a cube is 5cm. Find its total surface area.

***Solution:***

**Total surface area of cube =  $6a^2$ .**

Where **a** is side.

Given that **a** = 5cm.

Total surface area of cube =  $6 \times 5^2$

$$= 6 \times 25$$

$$= 150\text{cm}^2$$

$$V_{\text{cube}} = 5^3$$

$$V_{\text{cube}} = 5\text{cm} \times 5\text{cm} \times 5\text{cm}$$

$$V_{\text{cube}} = 125 \text{ cm}^3$$

# CUBOID

A Cuboids is a solid mensuration or 3-dimensional shape with rectangular base and side. It has six rectangular faces if all sides are closed

# NET OF A CUBOID

# EXAMPLE ON CUBOID

**Find the total surface area of a cuboid with dimensions 8 cm by 6 cm by 5 cm.**

$$\begin{aligned} TSA &= 2(lw + wh + hl) \\ &= 2(8 \times 6 + 6 \times 5 + 5 \times 8) \\ &= 2(48 + 30 + 40) \\ &= 2(118) \\ &= 236 \end{aligned}$$

So, the total surface area is  $148 \text{ cm}^2$ .

$$V_{\text{cuboid}} = L \times W \times H$$

$$V_{\text{cuboid}} = 8\text{cm} \times 6\text{cm} \times 5\text{cm}$$

$$V_{\text{cuboid}} = 240\text{cm}^3$$

# CYLINDER

A cylinder is prism whose cross-section is a circle

a) Curved surface Area

=Base circumference x Height

= $2\pi rh$  square unit

a) Total Surface Area

= Areas of all the faces

I. When both top are closed

= area of base + area of top + curved surface area

= $\pi r^2 + \pi r^2 + 2\pi rh$

= $2\pi r^2 + 2\pi rh$

= $2\pi r(r + h)$  square unit

II. When one top is opened

=Area of base + Curved Surface Area

= $\pi r^2 + 2\pi rh$

= $\pi r(r + 2h)$  square units

# EXAMPLE ON CYLINDER

Find the total surface area of a cylindrical tin of radius 17 cm and height 3 cm.

$$\begin{aligned}TSA &= 2\pi r(r+h) \\&= 2 \times 3.142 \times 17(17+3) \quad \text{(EODMAS)} \\&= 2 \times 3.142 \times 17 \times 20 \\&= 2136.56\end{aligned}$$

So, the total surface area is  $2136.56 \text{ cm}^2$ .

# SUMMARY

**Cube**

$$TSA = 6l^2$$

**Cuboid**

$$TSA = 2(lw + wh + hl)$$

**Cylinder**

$$CSA = 2\pi rh$$

$$TSA = 2\pi r(r + h)$$
